Course 3090: Deploying Novell Open Enterprise Server 2 for Linux

Course Overview

This is a 5-day course designed to assist current NetWare administrators and engineers in transferring their skills and knowledge from a NetWare environment to a Novell Open Enterprise Server 2 for Linux environment.

Training Level:

> 3 - Experienced

Duration:

> 5 Days

Key Objectives

During this course you will learn how to complete the following tasks:

- Understand the process for migrating services and data from NetWare to Open Enterprise Server 2 for Linux
- Configure and maintain patches, upgrades, and installation of Novell Open Enterprise Server 2 for Linux
- Understand the principles for supporting Novell Open Enterprise Server 2 for Linux issues, including troubleshooting and maintenance
- Understand storage using Dynamic Storage Technologies (DST)
- Manage the administration of security on Novell Open Enterprise Server 2 for Linux
- Perform configuring tasks for Novell Open Enterprise Server 2 for Linux services
- Understand and install virtualized NetWare

Audience Summary

The audience for this course is the community of NetWare administrators and engineers (CNEs) interested in moving their servers from NetWare to Novell Open Enterprise Server 2 for Linux or installing Novell Open Enterprise Server 2 for Linux servers into their existing network.

Additionally, those pursuing the Novell Certified Engineer Enterprise Services (NCE - ES) certification would find this course contains valuable information necessary for their test.

COMPLETE COMPUTING, INC.

Course Prerequisites

Students in this course should be current NetWare 6 or Open Enterprise Server NetWare CNEs, or have equivalent experience with the NetWare 6, NetWare 6.5, or Novell Open Enterprise Server for NetWare product. This includes strong experience with the following:

NetWare 6 or later server administration	Novell iFolder
Novell Storage Services (NSS)	Novell iPrint
Novell Client Protocol (NCP)	NetStorage
Novell eDirectory	Novell iManager
Novell Certificate Server	Novell iMonitor
DNS/DHCP	Novell Remote Manager

In addition, students should have previously attended Course 3089 (*Fundamentals of Novell Open Enterprise Server 2 for Linux*) or have equivalent experience.

Course Outline

This course covers a broad range of topics, many of which are listed below:

- Migrating services and data from NetWare to Novell Open Enterprise Server 2 for Linux
- Advanced configuring and installing of Novell Open Enterprise Server 2 for Linux
- Configuring and maintaining patches and upgrades
- Finding support for Novell Open Enterprise Server 2 for Linux issues
- Troubleshooting and maintaining Novell Open Enterprise Server 2 for Linux
- Understanding storage using Dynamic Storage Technologies (DST)
- Administering security on Novell Open Enterprise Server 2 for Linux
- Configuring common services on Novell Open Enterprise Server 2 for Linux
- Understanding virtualization
- Installing virtualized NetWare

Course Testing Information

This course helps prepare you for the Novell Certified Engineer - Enterprise Services (NCE - ES) certification test.
