

COMPLETE COMPUTING, INC.

10972BC: Administering the Web Server (IIS) Role of Windows Server

Course length: 4 day(s)

Course Description

This course provides students with the fundamental knowledge and skills to configure and manage Internet Information Services. This course is intended to help provide pre-requisite skills supporting a broad range of Internet web applications, security, and knowledge to help support other products that use IIS such as Exchange and SharePoint. In keeping with that goal, this course will not focus on any particular web application or development practice.

Audience Profile

This course is intended for IT Professionals already experienced in general Windows Server and Windows Client administration. No prior experience with any version of Internet Information Services is assumed.

Prerequisites

In addition to their professional experience, students who attend this training should already have the following technical knowledge:

- Experience with Windows networking technologies and implementation.
- Experience with Windows Server administration, maintenance, and troubleshooting.
- Experience with Windows Client administration, maintenance, and troubleshooting.

Course Content

Module 1: Understanding and Installing Internet Information Services

- Understanding a Web Server infrastructure
- Installing Internet Information Services

Module 2: Configuring The Default Website

- Examining the Default Website Using IIS Manager
- Examining the Default IIS File Structure
- Configuring DNS Records for a Website
- Creating Folders, Virtual Directories, and Applications

COMPLETE COMPUTING, INC.

Module 3: Configuring and Managing Application Pools

- Defining the Application Pool Architecture
- Creating and Managing Application Pools
- Configuring Application Pool Recycling

Module 4: Creating Additional Websites

- Understanding Configurations for Multiple Websites
- Configuring Website Bindings
- Creating and Starting Websites

Module 5: Configuring Website and Web Application Support

- Configuring Common Features
- Configuring Support for Web Applications

Module 6: Securing Websites and Applications

- Understanding IIS Authentication and Authorization
- Configuring Authentication and Authorization
- Configuring URL Authorization Rules

Module 7: Securing Website Data Transmission

- Understanding Certificates and SSL
- Creating and Managing Web Server Certificates
- Configuring HTTPS Bindings

Module 8: Managing Certificates in the Centralized Certificate Store

- Understanding the Centralized Certificate Store
- Installing and Configuring the Centralized Certificate Store

Module 9: Configuring Remote Administration

- Installing and Configuring the Management Service
- Connecting to Remote Web Servers and Websites
- Delegating Management Permissions

Module 10: Implementing FTP

- Planning for FTP
- Implementing an FTP site
- Uploading and Downloading by Using FTP

COMPLETE COMPUTING, INC.

Module 11: Monitoring IIS

- Monitoring IIS Logs
- Analyzing Performance Counters

Module 12: Backing Up and Restoring IIS

- Understanding IIS Backup and Recovery Components
- Backing Up and Recovering a Website

Module 13: Building Load-Balanced Web Farms

- Understanding Load-Balancing Mechanisms
- Building a Load-Balanced Web Farm by Using ARR
- Sharing Content in a Web Farm by Using Shared Folders
- Sharing Content in a Web Farm by Using DFS-R
- Sharing IIS Configurations in a Web Farm
