CISSP (Certified Information Systems Security Professional®) Certification Workshop

Course length: 5 day(s)

Course Overview

The demand for security certified professionals is on the rise. Security certified individuals earned some of the highest pay increases during the last several years. Along with this growth in demand has come a rapid increase in the number of security certification programs. The CISSP has clearly emerged as the key certification for security professionals. Many security related positions offered by employers now require a CISSP certification. Are you ready to get a piece of the action? If so, you should consider Complete Computing's CISSP training.

Course Benefits

Our 5-day CISSP training course has been designed by best selling CISSP author, Michael Gregg, to map directly to the 2015 updates to the CISSP® exam. Our course will provide the information you need to master the eight CISSP domains and pass the exam. Our CISSP training course provides a comprehensive review of the CISSP CBK including the following:

- Logical Asset Security
- Security and Risk management
- Security Engineering
- Communication and Network Security
- Identity and Access management
- Security Assessment and Testing
- Security Operations
- Security Development Security

Each domain of knowledge is broken into its critical topics in which these items are then discussed in terms of their relationship with one another and with other areas of information security.

Prerequisites

The CISSP training program is targeted at professionals with at least 5 years of experience in the information security field or 3 years of experience and a college degree (or equivalent life experience). Please review the [ISC2 web site](http://www.isc2.org) for complete information about CISSP certification rules and requirements.
